	Urgent	Not Urgent
Important	**Do - (Your MVP)** ● Setting up the different sections that the journal will have. ● Receiving input from the user that goes into the journal. ● Storing the user's journal entry and making it easy to access in the future.	**Schedule - (For V2.0+)** ● Formatting the journal so that it looks organized. ● Allowing the user to pick a certain font so that each entry feels more personalized. ● Allowing the user to pick a theme for the journal that goes beyond just font and font size. Maybe like the color of the background or even the color of the text.
Not Important	**Delegate - (Use a library)** ● Java.time - I could use this library to get the time for the date section in the journal. ● Github library - I could use this to	**Delete - (Cut it)** ● The program shouldn't only have templates that have sections. The user can also put their own sections and

	keep my project all in one place and track my progress as I code. ● Java I/O Library so that the .txt files can be created.	write about what they want. The template option is only there if the user needs guidance or inspiration on what to write about. ● Get rid of a “good job” message at the end of each journal entry. A journal entry is supposed to feel personal to the user and if the code is forcibly adding something to the end, it may take away that feeling. ● Try to cut-down on the amount of pop-ups that I may have in the program. If the program is asking too many questions about how the user wants to format something, the user could get overwhelmed.
